

Photo ID Solutions

Our remote capture system includes a digital camera that allows you to capture images in remote locations and transfer them to the DataCard Badging System for high-quality photo ID production.

Capture images across town or around the world

The DataCard® QuikWorks™ remote capture system makes it easy to produce photo IDs for employees, students, members, customers and other cardholders who are located away from your central badging sites.

The complete package features the compact Ricoh® digital camera, a PCMCIA reader, one memory card, a lightweight tripod and backdrop, QuikWorks™ remote photo manager software and a convenient carrying case.

Simply take pictures with the camera, remove the memory card and send it to your central badging location. Then, import the images into the DataCard Badging System using the reader and software. Additional memory cards are useful for facilitating a continuous flow of information between sites.

Brilliant, full-color images

The digital camera features a full-color LCD monitor that lets you preview images to ensure they are acceptable before you save the image. If a retake is necessary, simply erase the image and take a new photo.

The camera's high-resolution capability and built-in flash also help ensure excellent image quality. In fact, images you capture in remote locations will look just as crisp, clean and colorful as the photos you capture centrally with the QuikWorks video camera.

Easy to carry, easy to use

The camera weighs only 10 ounces (285g), and the total package weighs less than 15 pounds (6.8 kg). The convenient carrying case is compact, so it's easy to carry or ship. Plus, the components are easy to use, even for first-time operators.

DataCard QuikWorks Remote Capture System

A complete solution

The consumer marketplace offers a number of low-cost, low-resolution digital cameras, but only the QuikWorks camera and software package provides the image quality and system capability you need.

A reliable, proven partner

DataCard is a world leader in plastic card solutions. That's why customers around the globe use the QuikWorks remote capture system to create attractive, high-quality photo IDs for cardholders in remote locations.

DataCard®
